11S

Angle-Nose Pliers

Jaws are milled with deep, self-gripping pipe wrench style teeth. Bolts are hardened. The 10" and 11" are equipped with a **Grip Tight Clip™** which pulls the bolt into positive alignment in its slot when pliers are under pressure. The 11" has a **Notched Nose** which fits vertical rib on basket strainer nut as well as hub caps and dust covers. The 428N has a **Smooth Jaw**, intended to prevent marring on brass, copper, chrome, nickel, PVC and other materials. The G251P, G262P, G263P, and G264P have a **Wire Cutter** in the throat of the pliers. Note: The Flush Fastener nut and bolt is NOT guaranteed if using the wire cutter for #9 or larger gauge wire.
