

The Heavy Duty Spun Glass is a continuous filament spun glass. The frame is made with one continuous piece of chipboard to guard against corner separation. A tough metal media retainer is adhered to the frame on both upstream and downstream sides for extra filter strength. For peak equipment protection and energy efficiency, these filters should be changed monthly in periods of high use. Buy a case and be set for the year!

Item

Heavy Duty Spun Glass

Effective Protection Against

DUST/LINT

Important Features

- Heavy duty spun glass; lasts up to 30 days
- maximum air flow
- alleviates strain on equipment
- two-sided metal reinforcement

Item Number: 10255

Vendor Case Quantity: 12pk.
