The Raintight NEMA 3R power inlet box is designed for use with any transfer switch, generator-ready load center, as well as many stand-alone applications. The power inlet box is usually installed outdoors, in an area where the generator is being used. Using one of the four combination 1/2-inch and 3/4-inch knockouts (One on each side, bottom and back) the power inlet box can be wired directly to the transfer switch or panel. The exclusive patented design provides generous wiring space and facilitates rough-in.
